

High-Speed Terminals

BENEFITS AT A GLANCE

- Increase sales volume
- Enhance your customers' experience
- Simplify your daily business activities

Keep business moving and sales volume high.

Shorter transaction time means you complete more sales faster than you could with dial-up service, adding a few more dollars to the register every day.

Serving your customers quickly and smoothly is a cinch with a point-of-sale terminal equipped for high-speed IP (Internet Protocol) communications. Combined with Chase Paymentech's reliable networks and 24-hour service, transactions are hassle-free – for both you and your customers.

IP lets you eliminate dedicated phone lines for card transactions. Your IP line is always on – your terminal doesn't need to dial out. If your business uses a phone or fax line for transactions, you can leave that line open for customers to call.

Enhance your customers' experience.

Even when there's no line at the register, customers expect a speedy checkout. Show them their time is important to you and keep them coming back.

Add a layer of reliability.

Chase Paymentech processes IP transactions through NetConnect, our proprietary, secure communications tool. Using your existing Internet connection, NetConnect ensures that your transactions are completed quickly and smoothly.

If your Internet connection temporarily fails, you can rely on your terminal's dial backup connection to complete your transactions. Plus, Chase Paymentech's terminals meet all card association requirements for secure transactions.

Gain access to new financial management tools.

Adding an IP terminal solution at the point of sale requires an Internet connection, which (if you don't already have Internet service) opens up other opportunities for your business.

Resource Online is Chase Paymentech's suite of online tools that help you do everything from managing chargebacks to accessing your merchant statement. Ask your Chase Paymentech representative for more information about how you can use Resource Online to improve the way you manage your business.

Chase Paymentech offers three high-speed, IP terminals so that you can select the best fit for your business.

VeriFone® V* 570

The dual-mode VeriFone V* 570 has both dial and IP-based communication options to provide efficiency, flexibility and convenience.

- Dial backup
- Anti-glare backlit display for usability
- 6 MB memory for value-added applications
- For Retail, Restaurant and Petroleum environments

Hypercom® Optimum™ T4220

The Hypercom Optimum T4220 features an intelligent IP diagnostics application to monitor and communicate failure occurrences, locate the source of the error, and instruct the user on how to repair it.

- Dial backup
- IP diagnostic application for easy troubleshooting
- 24 MB SDRAM for value-added applications
- For Retail and Restaurant environments

Ingenico® 5100

With an easy-to-use, 15 lines per second thermal printer, a high-speed modem and a powerful processor, the Ingenico 5100 is designed for fast transactions and short lines.

- Dial backup
- For Retail and Restaurant environments
- Light-weight
- 10 MB RAM

VeriFone® V* 510

The V* 510's user-friendly device simplifies customer PIN entry, and the easy-to-read, backlit display and ATM-like interface reduce the chance for errors.

- For Retail, Restaurant and Petroleum environments
- Multi-application for additional software
- 12 MB RAM
- Lower-cost, dial-only version also available
