Mobile Terminals

BENEFITS AT A GLANCE

- Access new markets and new customers
- Offer customers confidence and control
- Lower transaction fees

Take your business to new places – literally.

Mobile terminals transmit transaction data over secure wireless networks.

With Chase Paymentech's long-range wireless (mobile) transaction processing, your business can accept payment wherever you take it.

Access new markets and close more sales.

Never miss a sale. Chase Paymentech's mobile terminals let you take the point of sale right to your customers and accept payment for goods and services instantly.

On-location Services: catering, lawn and home maintenance

Transportation: taxis, mass transit and vehicle rental

Events and Venues: concerts, sporting events, trade shows and conferences

Give your customers control and security.

Wireless transactions mean your customers never hand their card to a server or cashier. During a transaction, their card information is safe with secure payment software. The ExaDigm XD2100SP and the VeriFone V^{x}610 meet all card association requirements for secure transactions.

Lower your transaction fees.

Convenience for your customers leads to direct savings for your business. Customers prefer to pay with PIN debit. Provide them with payment at their location, and you'll pay lower interchange rates each time a customer opts to pay with PIN rather than signature debit.

Taking card numbers over the phone and entering them manually is even more costly. Swiping the consumer's card saves transaction fees over manual account number entry.

CHASE ™
Paymentech

Chase Paymentech offers two mobile, long-range wireless terminals so that you can select the best fit for your business. Transaction data is protected by Secure Sockets Layer (SSL) encryption for both of the terminals below.

VeriFone® V^x 610

The V^x 610 offers CDMA or GPRS (GSM)* communications with coverage through VeriFone Connect, a wireless service aggregator.

- CDMA or GPRS (GSM)* nationwide coverage
- Multi-application, allowing value-added software if desired
- 6 MB RAM
- For Retail and Restaurant environments

ExaDigm® XD2100SP

The XD2100SP comes with your choice of three interchangeable wireless communication options, each with dial and IP backup capability and with optional RFID contactless payment support.

- CDMA or GPRS (GSM)* nationwide coverage
- Short-range WiFi modem also available
- For Retail and Restaurant environments

* CDMA (Code Division Multiple Access) and GPRS (General Packet Radio Service) are standard wireless communication protocols. They have different strengths and different coverage areas. Your Chase Paymentech representative can help you determine which one is right for your needs.
