Portable Terminals

BENEFITS AT A GLANCE

- **Close more sales in less time**
- **Offer customers confidence and security**
- **Lower transaction fees**

What is a portable terminal?

Portable terminals are equipped with short-range wireless equipment, like Bluetooth or WiFi. You can take the handheld units away from the point of sale to accept payments. Transaction data is transmitted back to a stationary base to complete the transaction over a standard IP or Dial connection.

Close more sales in less time.

Chase Paymentech's portable solutions let you take the point of sale right to your customers and close more sales, faster. Our selection of short-range wireless terminals is an ideal option for several environments:

Dining: pay-at-the-table, delivery and curbside pickup

Retail: garden centers, beauty/nail salons and sidewalk sales

Events and Venues: concerts, sporting events, trade shows and conferences

Give your customers control and security.

Wireless transactions mean your customers never have to hand their card to a server or cashier; and during a transaction, their card information is safe with secure payment software. The ExaDigm XD2100SP and the Ingenico 7780 meet all card association requirements for secure transactions.

Lower your transaction fees.

Convenience for your customers leads to direct savings for your business. In a fine dining environment, a portable terminal solution allows customers to enter their PIN and complete the transaction themselves. And you pay lower interchange rates each time a customer opts to pay with PIN rather than signature debit.

CHASE ™
Paymentech

Chase Paymentech offers two short-range, portable wireless terminals so that you can select the best fit for your business. Bluetooth or WiFi connectivity lets you take the transaction to the customer at your place of business (approximately 300 feet indoors, but up to 1,000 with no signal obstruction).

Ingenico® 7780

The i7780 offers Ingenico's award-winning Pay@Table® technology. Up to seven mobile devices over Ethernet (five over dial) can sync with a single base, further simplifying the transaction environment.

- Handheld terminal device lifts from Bluetooth base
- Ethernet connectivity with dial backup
- No additional hardware required
- Available with software for Retail and Restaurant environments

ExaDigm® XD2100SP

The XD2100SP's cost-efficient modem options make changing the communication method with a new or second modem less than 1/3 of the cost of a new terminal purchase.

- WiFi technology
- Ethernet connectivity with dial backup
- Uses "Store & Forward" technology when not in range
- Requires a wireless router
- Available with software for Retail and Restaurant environments
- Additional, long-range wireless modem options available
